SUMMARY

Founding AI Engineer with 1+ year of experience building production-grade Generative AI systems using LLMs, Retrieval-Augmented Generation (RAG), and agentic workflows. Specialized in developing context-aware AI assistants, content generation platforms, and intelligent automation systems for sales and marketing use cases. Strong expertise in LangChain, LangGraph, vector search, and scalable backend architectures, with hands-on experience in cloud integrations, async processing, and API-driven systems. Additionally experienced in machine learning for real-time decision systems, including fraud detection using hybrid approaches combining supervised learning (Gradient Boosting) and unsupervised anomaly detection (Isolation Forest).

EXPERIENCE

10/2025 - Present

Hyderabad, India

Founding AI Engineer – Generative AI
Sagara Global

Designed and developed scalable AI-powered sales, CRM, and marketing solutions leveraging LLMs, RAG pipelines, vector search, and MCP (Model Context Protocol); built context-aware agent workflows using LangChain and LangGraph for opportunity analysis and content generation; and implemented hybrid machine learning models (Gradient Boosting and Isolation Forest) for real-time anomaly detection and predictive analytics, exposed via high-performance FastAPI-based REST APIs.

TECHNICAL SKILLS

· **Programming**: Python,HTML,Css
· **Backend & APIs**: Django,FastAPI, RESTful API Design
· **Generative AI:** LLMs, OpenAI,Gemini,AWS BedRock ,Retrieval-Augmented Generation (RAG), Model Context Protocol (MCP), Fine-tuning
· **Agentic AI:** LangChnain,LangGraph,LangSmith,Google ADK
· **RAG:** Similarity Search,KeyWord Search,BM25,Reranking,Hybrid Search,Metadata Filtering,Advanced Chunking
· **Vector Databases :** Weaviate, Qdrant, Pinecone,Pg Vector,Milvus,Faiss
· **Machine Learning:** Predictive Modeling, Anomaly Detection, Regression, Classification, Clustering, Feature Engineering, Model Evaluation, Exploratory Data Analysis (EDA), Scikit-learn, NumPy, Pandas, MLflow,Isolation Forest
· **DevelopmentEnvironments**: VSCode,PyCharm
· **Deep Learning:** Neural Networks (CNN, RNN, Transformers)
· **Databases:** PostgreSQL,MySQL
. **Graph DB :** Neo4j
· **NLP:** Text Processing, Tokenization, NLTK, spaCy,TF-IDF,
· **Cloud & Identity:** Microsoft Graph API, AWS S3 & SageMaker (Fundamentals),AWS RDS
· **Tools:** Git, Github,Jira,Postman, Jupyter Notebook,VS Code,
· **Security:** OAuth2, JWT
· **Methodologies:** Agile, Scrum

KEY PROJECTS & CONTRIBUTIONS

AI-Powered Sales, CRM & Marketing Automation Platform

Oct 2025 – Present

· Architected and built an AI-powered Sales Intelligence, CRM, and Marketing Automation platform, integrating LLM-based assistants, Retrieval-Augmented Generation (RAG), and agentic workflows to automate lead management, opportunity analysis, content generation, and campaign execution across a scalable, multi-tenant system.

· Integrated AWS Bedrock LLMs (Claude Sonnet & Haiku) to power AI-driven sales assistants for opportunity analysis and decision support.

· Developed an AI-powered sales assistant using LangChain and LangGraph, implementing context-aware agent workflows with tool-based database retrieval to dynamically fetch lead, opportunity, and interaction data for intelligent analysis and next-best action recommendations, along with multilingual email drafting and seamless email sending/scheduling via Microsoft Graph API integration.

· Built a LangGraph-based Content Strategy Agent with multi-node workflows, enabling multi-step reasoning to generate, update, and manage data-driven marketing strategies.

· Designed and developed a modular AI-powered Content Engine using Playwright and LLMs, implementing a factory pattern–based architecture to support multi-format content generation (images, HTML, PDFs, PPTs); configured dynamic JSON-based class loading and integrated MCP-based server-client communication to orchestrate content generation workflows via agent-driven execution.

· Developed a Retrieval-Augmented Generation (RAG) system using Amazon Titan embeddings, implementing hybrid retrieval (semantic search + BM25), metadata filtering, and re-ranking to enhance top-k relevance; integrated OCR for scanned document processing and built scalable FastAPI services for ingestion, chunking, and vector storage (pinecone).

· Designed and implemented database models and core backend features using Django, while developing separate FastAPI-based microservices for AI functionalities (RAG, LLM workflows, content generation), enabling a scalable architecture with clear separation between business logic and AI services.

· Designed and implemented OAuth2-secured integrations with platforms including Outlook (Microsoft Graph API), Instagram, Facebook, LinkedIn, Twitter, and HubSpot, along with asynchronous email and social media scheduling using Google Cloud Tasks to enable scalable and automated campaign orchestration

· Developed authentication and authorization systems using Django and FastAPI, implementing secure access control with OAuth2/JWT and enforcing Role-Based Access Control (RBAC) for multi-tenant environments (admin, sales, and marketing roles).

· Integrated AWS services including Bedrock, S3, and RDS to support scalable AI workflows, enabling LLM-based processing, secure document storage, and reliable data management within the platform.

Credit Card Transaction Fraud Detection & Risk Decision Engine

AIML Intern — Ignitz Solutions Pvt. Ltd.
Mar 2025 -Oct 2025

· Implemented a real-time fraud detection system to process streaming transaction data and generate instant risk scores within sub-200ms latency.

· Built a hybrid machine learning pipeline combining supervised models (XGBoost) and unsupervised anomaly detection (Isolation Forest) to detect both known and unknown fraud patterns.

· Developed a dynamic feature engineering pipeline to compute behavioral features (transaction frequency, location variance, device changes) in real time.

· Developed low-latency FastAPI-based inference services with asynchronous processing, enabling scalable and high-throughput fraud detection.

· Designed a risk scoring and decision engine to classify transactions into approve, block, or step-up verification, optimizing precision-recall trade-offs and reducing false positives.

EDUCATION

2022- 2025

Gudur, Ap, India

Bachelor Of Electrical and Electronics Engineering
Audisankara Institute of Tecnology

CGPA : **8.73** / **10**
